

The program is held in **two phases**

**Phase 1** : An Orientation on Engineering, it's possibilities, the current scenario, the admission process and everything else that's relevant for a school student will be given by our WIE Volunteers. (Focus group : Classes 8-12)

**Phase 2** : Selected students from the school will be taken to a prominent engineering college in the zone and will be given a chance to explore the labs, workshops and other facilities available there. They will also be given a chance to see the live projects happening in the campus at that time, if any.
